For this book, the focus is on using Photoshop for creating Web images. Here are just a few of the things you can do in Photoshop for the Web. Creating images using the Layers panel Creating web images (and any other raster images) begins with the Layers panel. Photoshop gives you a simple way to create and manipulate images by assigning different areas of an image to different layers, and then, at any time, select which layer you want to work on. If you have your image laid out in layers, you can use the Layers panel to control how those layers interact with one another. Some of the most basic image manipulation techniques — including creating effects such as fog and blurring and sharpening — are built into the Layers panel and will work regardless of your placement on a layer. Getting acquainted with the Layers panel So, what exactly is a

layer? Each layer represents some aspect of your image, whether it's an adjustment, such as brightness or color, or a brush stroke or filter. Create a new file and add some elements (backgrounds, items, and so on) to it. In the window that appears, make sure that there is a separate tab titled Layers. When you click the Layers tab, a window appears that lists all your image layers. The Layers panel can look intimidating at first. In Figure 1-1, you can see that I have three layers assigned to the image. But as you view the Layers panel and experiment with the options, you'll see that it's pretty easy. I list some of the most common menu commands in the remainder of this chapter and some of the more important settings at the end of the chapter, but you don't need to get too fancy with any of them. I'll often simply talk about the Layers panel instead of the individual commands. Choosing the background Each layer has its own background color. Select the background of the current layer by clicking it or pressing Tab. Clicking the color picker in the Layers panel allows you to choose a new color for that layer. You can set the background to a solid color (black or white) by changing the color to one of those two choices. Or you can use a gradient or image that you assign to this layer to make the background

more interesting. See Chapter 4 for more about styling backgrounds. Using Layer and Selection Windows The Layers panel

The European Competition Authority issued new details yesterday about its ongoing investigation of Nokia and Microsoft. The investigation is examining whether Nokia's (NOK) acquisition of Microsoft's (MSFT) mobile phone business was based on "unlawful" threats to break up the mobile industry. The investigation has been ongoing since September 2012, and the EU noted that progress has been made, but it has yet to issue a statement about its conclusions. The EU has also told businesses to stay the heck out of the investigation, including manufacturers, retailers, and carriers. The latest developments are centered on the allegations of a Nokia lawyer who worked on the deal and has been suspended from working on telecommunications matters in the EU. According to an internal EU document, the lawyer wanted to change the deal to "prevent Nokia from acquiring Alcatel-Lucent (ALU)," the French-based telecom company that today has a $14.8 billion market capitalization. The lawyer also wanted to add an additional condition that would require Nokia to purchase a stake in Nokia Siemens Networks (NSN). Nokia at the time was purchasing Alcatel-Lucent's

mobile phone business and the conditions were discussed before Nokia and Microsoft publicly announced their deal in May 2011. EU concerns about the "unlawful" behavior were first raised by Swiss competition regulators in November 2012. They based that claim on a study that showed that the deal could hurt consumers by allowing Nokia to control 70% of the global mobile network equipment market and triple its share in the European mobile network equipment market, according to the EU. European officials gave a broad statement about the case in October. They said that they saw no "unlawful conduct" and Nokia doesn't have to buy any additional shares of NSN. "Nokia and Microsoft have confirmed that they comply with the rules on State Aid in all Member States," said Commissioner Margrethe Vestager. Nokia, which noted that the EU "is unable to obtain any evidence of the allegations," has responded to the EU's accusations. "Nokia confirms that it complied with the relevant EU State Aid rules before and after the acquisition of Alcatel-Lucent's telecommunications division. As the EU does not have any evidence to support the allegations, Nokia does not agree with the conclusions of the announcement which is currently being reviewed by the EU decision makers," said Nokia.

"Nokia has a long-standing record of providing direct employment, and

[Type 2-diabetes mellitus--treating beyond blood glucose]. In the treatment of type 2-diabetes mellitus the glucose metabolism has to be considered in addition to blood glucose. Two important issues are related to insulin resistance, i.e. hypoinsulinaemia, and to insulin secretion which is markedly disturbed in type 2-diabetes mellitus. In addition to these complications, the overall treatment of type 2-diabetes mellitus is influenced by the age of the patient, his cardiovascular status, his nutrition, weight management, compliance and psychological well-being. Most of these factors are influenced by the practitioner. Thus, the treatment of type 2-diabetes mellitus is very much a team job. The treatment goals are multifactorial. Only a few lifestyle interventions have been shown to be effective. These include weight reduction, increased physical activity, regular meals, a reduction in simple carbohydrates (diet) and saturated fat, increased unsaturated fat intake, reduction in alcohol intake and smoking cessation. Unfortunately, these

interventions are seldom part of routine diabetes care and they are seldom followed by the practitioner in this disease. In contrast to the recommendations concerning the treatment of type 2-diabetes mellitus, special attention must be paid to the treatment of cardiovascular morbidity and mortality. Thus, practising physicians should inform their patients about the need for a healthy life-style in the prevention of diabetes, and the benefits of physical activity, regular meals and a healthy diet. It is the physician's obligation to prevent these diabetes-promoting behaviours in his patient. Physicians must try to improve the patient's compliance by explaining the necessity of a healthy life-style. Furthermore, it is the physician's obligation to measure blood glucose and to monitor patients with diabetes, in order to prevent complications and to adjust treatment.Scale antennas with some form of a liquid reflector have been used in the prior art to provide high frequency communication without the use of a cavity. This has been done with a common agreement of "conventional" antennas, where the core is surrounded by a common plate in contact with a liquid. While these antennas provide improvements over the use of solid reflectors in the prior art, scale antennas are often limited in performance. A

conventional solid reflector antenna may include two horns, where one horn is feeding the other horn via a waveguide. The waveguide is surrounded by the reflector which includes a solid block of plastic which has a size comparable to that of the reflector. The angle of the horn
