----- GetWInfo is a small application that enables you to you choose any window or sub-window, get information about it and send it window messages. GetWInfo is made mainly for Windows programmers and advanced Windows users, though it can be useful for particular uses such as finding a window that has been moved off the visible desktop etc. For the latest version of GetWInfo visit: [Latest version history available online: Versions](#)

of GetWInfo available from Delphi 2.0 up to version Delphi XE6. Note: The Free version of GetWInfo is distributed as a Microsoft ActiveX control. The control is redistributable under the terms of the Microsoft Open Source License.

What's New in the?

GetWInfo is a small application that enables you to you choose any window or sub-window, get information about it and send it window messages. GetWInfo is made mainly for Windows

programmers and advanced Windows users, though it can be useful for particular uses such as finding a window that has been moved off the visible desktop etc. It can open each window in the system, or can only get information about windows that are already open. It can only get information about windows on the current desktop, but can still provide some useful information about the other desktops. It can also open individual windows from any open application, or can just open a window from a selected text file. It can also open

each sub-window in an application. This program is a Windows standard tool which can be used in any application. GetWInfo provides information about the window that is currently active, but can give information about any window, and even about windows that are inactive or obscured. It can give the program name, the program and the window title, as well as the size and position of the window. It can also be used to send messages to windows, such as Move, Maximize, Restore, Minimize, Maximize on all, Minimize,

Maximize on all, and Close. It can even open any window you choose from a text file. Finally, it can be used to get information about each window or sub-window, get the active window, or get the window of the currently open document. == Info/Usage ==

System Requirements:

Software: Immortal / Oclegfx –

Main Plugin Menu Bar Plugins:

Immortal – Drag ‘n’ Drop GTK

Theme Manager Oclegfx – GTK

Theme Manager Plugin Openbox

– Openbox Window Manager

Roxygen2 – GNOME User

Interface Documentation

Generator Screengrab – Simple

screenshot application Terminal -

GNOME Terminal Other:

Code::Blocks – C/C++ IDE Glibc

– Libraries for C Imlib2 –

Libraries
